The product presents biostimulant property

FORMULATION

FLUID LIQUID

FEATURES

BIOSTIMOLANTE L is a compound based on amino acids readily available for the processes of protein synthesis, enzymes, vitamin complexes and substances with bio-activator action. The product ensures greater foliar absorption and better use of mineral fertilizers, and increases the physiological and metabolic functions of crops, thus enabling plants to increase productivity. Indicated in situations of stress caused by frost, drought, transplanting, pruning, and parasitic attacks.

PECULIARITY

THIS PRODUCT HAS GOT THE AUTHORIZATION FOR USE IN BIOLOGICAL AGRICULTURE

USAGE

FOLIAR TREATMENT

DOSAGE AND FIELD OF USE		TREATMENT
POMACEA AND DRUPACES	100-150 g/hl	1st treatment for pre-flowering
		2nd treatment for rooting
		3rd treatment on fruit enlargement
GRAPES	100-150 g/hl	1st treatment of flower buds
		2nd treatment for pre-flowering
		3rd treatment for bunch closing
		4th treatment applied when the grape becomes reddish in colour
HORTICULTURE	100-150 g/hl	1 treatment after transplanting (post-emergency)
FLORICULTURE	150-300 g/hl	3 treatments every 15-20 days, from transplanting or on restart of growth.

BIOSTIMOLANTE L can be mixed with all foliar fertilizers and with any antiparasitics. It cannot be mixed with alkaline formulations and mineral oils.

Package size: 1 kg bottle
