FEATURES

EN 20-20-20 P is a foliar product featured by a high purity of its components and high solubility. The ratio of most important macro-elements in the formulation enables to perform applications in all most important phenological phases of the plants (post-transplant, pre and post flowering and fruits growing in fruits trees and grapes).

Its utilization is suggested starting from the first vegetative phases of the plant when the soil temperature is still low and is not allowing the plant to absorb through the roots an enough quantity of fertilizing elements as per its need.
