

CAPRARA UNDERSIGNES THE QUALITY

AMMIN. 11 L

**ORGANIC NITROGENOUS FERTILIZER
Animal Hydrolyzed Fluid Skin Crap**

COMPOSITION

Total Nitrogen (N)
Organic Nitrogen (N)
Organic Carbon biological origin (C)

9 %
8,7 %
32 %

FORMULATION

FLUID LIQUID

FEATURES

AMMIN. 11 L is an excellent nutritive formulation obtained through hydrolysis of proteins and composed by amino-acids, peptides and polypeptides and specific coadjuvant elements. Its strong efficiency is due to:

- its high contents in free amino-acids with low molecular weight which allow the maximum utilization of the product thanks to the quick absorption from the plant, roots and leaves.
- penetrating substances having strong activity in the roots and leaves

Thanks to its special formulation, **AMMIN. 11 L** acts by increasing the germination and resistance of the pollen grains and the increase of the pollened tube.

The compounds having phytostimulating and chelating action, which are naturally present in the utilized raw materials, stimulate the growth and the development of the plant when the same is subjected to heavy efforts such as during **blossoming, growth, development, after pruning etc.** At the same time they are of vital help when the plant is suffering or suffered some stress: frost, dryness, phytotoxic effect due to pesticides and they have a regenerating action after a **high action**.

PECULIARITY

THIS PRODUCT HAS GOT THE AUTHORIZATION FOR USE IN BIOLOGICAL AGRICULTURE

USAGE

FOLIAR AND ROOT TREATMENT

DOSAGE AND FIELD OF USE	FOLIAR TREATMENT	ROOT TREATMENT
FRUITS - CITRUS TREES GRAPES AND OLIVE ORCHARDS - HORTICULTURE	200-300 g/hl	750 g/1000 m²

AMMIN.11 L is suitable for all crops except for apricot and plum trees because its application could create some phyto-toxic trouble.

AMMIN.11 L can be mixed with most common anti-parasitics except mineral oils, cupric products and sulphur ones. After an application with copper salts, have a rest of 4-5 days before using **AMMIN. 11 L**.

Package size: 1 kg bottle
