

CAPRARA UNDERSIGNES THE QUALITY

PRIME-FRUIT

COMPOSITION

Seaweed extracts	(28%)
Polysaccharides	(26%)
Vitamins (A,B ₁ ,B ₂ ,B ₁₂ ,C,D,D ₆ ,K)	
Sea-weeds	

FORMULATION

LIQUID

FEATURES

PRIME-FRUIT is a product obtained from a base of grey seaweeds, which after having been dissolved in water and applied directly on leaves and on young buds, forms a protective film thus reducing considerably the transpiration of the plant without decelerating its physiological functions. It stimulates the improvement of the natural defences - the chlorophyll formation and the cellular division. It also improves the assimilation and transformation of Nitrogen within organic compounds. It resolutely acts in the photosynthetic function by producing an elevated content of sugars, which are important for obtaining a better quality of the fruits. It avoids the cracks of the fruits due to an excess in nutrients. The product regulates the functions of Nitrogen, Magnesium and Potassium, which are essential for achieving the best crop.

It prepares the plant for a good vegetative re-starting for the next year.

The phytosanitary treatments are facilitated - Increase of resistance to frozen - The excessive water evaporation of the leaves during drought periods is avoided.

USAGE

FOLIAR TREATMENT

DOSAGE AND FIELD OF USE

2 kg/1000 lt of water x Ha

Use **PRIME-FRUIT** at buds increase (phenological state C) and during the dispersion phase for improving the development and ripening of fruits

Use plenty of water with a good distribution up to dripping. If required, repeat the treatment after 2/3 weeks

PRIME-FRUIT can be mixed with common antiparasitics. In case of mixtures with other products, it is suggested to always ask for the advice of a reliable technician.

Package size: 5 kg can
1 kg bottle
